

TS20** Executive Jets

I was asked if I could supply an executive jet for a route and with the help of a free 3D model I was able to sort out a couple of minor problems with it in 3DCrafter and then export two versions into Train Simulator with some re-skins.

Once installed the models will be found in the editor under the "PeopleAnimalsVehicles" section with the names starting "WW_Small-Jet ****"

Feel free to include the aircraft in any Assets Package for your route, or just link to my site:
